DETAILED ACTION

Response to Arguments

Applicant's arguments filed 7/9/02 have been fully considered but they are not persuasive.

Claim Objections

Claim 5 is objected to because of the following informalities:

"a real seat" should be --a reel seat--

. Appropriate correction is required.

Claim Rejections - 35 USC § 102

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claim 1 and 3-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Yamato (5222319).

As to claim 1, disclosed is an oblong pipe-shaped body (fig. 1); a reel foot (1, fig. 1 shows a reel with a foot); a reel foot placing surface (6); a movable front hood (F) and a fixed rear hood (R); a trigger (2) with a front surface, the front surface of the trigger which is closest to the rod slopes toward the downward and backward direction relative

to a rear end or the lower portion of the body and having a length that is capable of at least two average size adult user's fingers can be placed thereon.

As to claim 3, disclosed is a top portion of an area of the front surface of the trigger on which a user's finger can be placed is positioned behind a portion immediately below the highest position of an opening portion of the fixed rear hood (R; fig. 1).

As to claim 4, disclosed is a protrusion from the tip of the front surface of the trigger which is capable of sliding prevention (fig. 1).

As to claim 5, disclosed are the limitations of the instant claim including a handle (3) that extends backward from a position of the reel seat.

Claim Rejections - 35 USC § 103

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Yamato (5222319).

As to claim 2, not disclosed is the inclination angle of the front surface of the trigger with respect to a direction perpendicular to a center axis of the fishing rod body which in the range of about 25 to about 55 degrees. It would have been obvious to one having

ordinary skill in the art at the time the invention was made to comprise the trigger with an inclination angle in the range of about 25 to about 55 degrees, since it has been held that discovering the optimum or workable ranges involves only routine skill in the art.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
